TRAINER BIODATA

Ir Ts Dr Leong Kah Hon is an Associate Professor in the Department of Environmental Engineering, Faculty of Engineering and Green Technology at Universiti Tunku Abdul Rahman (UTAR) and a HRDF Accredited Trainer. He obtained his Doctor of Philosophy (Civil and Environmental Engineering) from Universiti Malaya and professional qualifications from the Board of Engineers Malaysia and Malaysia Board of Technologists. He practises his engineering in Singapore for three years before joining the education sector. His great contribution to the environment sustainability has awarded him the AAET Green Award 2021 (Malaysia). He has more than six years of experience in teaching. His effective and interactive training methods that emphasise hands-on approaches have earned him much recognition. He was also the recipient of UTAR Teaching Excellence Award in year 2021.

SYNOPSIS

Environmental, Social, and Governance (ESG) are three critical pillars that guide companies in the built environment industry towards sustainable and ethical operations. In this context, ESG encompasses a set of strategies, supported by a structured action plan and transparent communication about the outcomes. These strategies are fundamental in generating detailed reports that mark the beginning of a journey to develop a strategy that helps companies in the built environment set goals, monitor progress, and tackle sustainability-related impacts and challenges. This process is crucial for providing stakeholders with clear insights into the company's direction within the industry.

The primary goal of ESG in the built environment is to identify and address all non-financial risks and opportunities integral to a company's day-to-day operations. This approach fosters a comprehensive perspective on sustainability and corporate responsibility, ensuring that built environment companies not only comply with regulatory standards but also contribute positively to environmental preservation, social well-being, and ethical governance. This holistic approach is essential in shaping the future of the built environment, making it more resilient, sustainable, and responsive to the needs of society and the planet.

COURSE PROGRAMME

Time	Agenda
