SYNOPSIS

GFRP bars, also known as Glass Fiber Reinforced Polymer, are lightweight and corrosion-resistant composite materials used in construction. They are an alternative to traditional steel reinforcement and offer advantages such as non-conductivity and durability. GFRP bars are commonly used in structure and infrastructure projects like building, bridges and marine structures, providing a reliable solution for areas prone to corrosion. Based on the American Concrete Institute code, this certified green product, also known as "Green Steel," combines polymer rebar reinforced with nanotechnology fiberglass for high performance.

PROGRAMME TENTATIVE (13/JULY/2024)

TIME	AGENDA (13 July 2024)
9.30am	Arrival of participants in CRT Manufacturing (Registration)
9.45am	Breakfast
10.00am	Brief GFRP Materials Properties
11.00am	Tea Break
11.10am	Briefing of Designs to participants on ACI Code
11.30am	Q&A Session
12.00noon	Factory Visit and Photo Session
1.00pm	End of Visit and Lunch

CALL NOW : 03-78900133
