Synopsis

SKF MALAYSIA SDN BHD – Sustainability- SKF has a long history of working with industrial sustainability. It is an integral part of what we do every day. we strive to create engagement throughout the business, not only by implementing sustainability on a strategic level, but also by encouraging the ideas and grass root projects that initiated.

In order to continue on the journey to enable rotation for a better tomorrow, more needs to be done. We all need to move towards a clean, responsible, net-zero, fully circular society – something that must happen with a speed and on a scale not seen before.

So, how does SKF fit in? Well, the largest contribution lies in providing clean technology solutions for the industrial transformation, and in developing more and more of our products to become lighter, more efficient, longer lasting, repairable, and, ultimately, recyclable. This in turn helps the end users reach their goals for sustainability and growth. By challenging ourselves, and by inviting others to collaborate, we can continue to find new ways to influence all aspects of the future sustainable business.
